### **REASON FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: allowance of claims 36-56, 73-82 is indicated because the prior art of record does not show or suggest said solid support member includes a cartridge for a carrier or a cover plate for a carrier and comprising an electrically conducting material, said conducting material being in contact with a layer of heat conducting material, said heat conducting material is in contact with the specimen, and said method comprising a step of subjecting said solid support to an oscillating magnetic field as recited in claims 36-54, 73-74; the steps of placing the microscope slide in a cartridge comprising a chamber encompassed by a cartridge wall having an inner side, said cartridge comprising an electrically conducting material in the form of a solid piece of conducting material placed on the inner side of said cartridge wall and placing the cartridge in an induction coil and sending alternating current through said coil to generate a magnetic field as recited in claims 55-56; the step of employing a solid support member in combination with a carrier and an electromagnetic inductor, said inductor, comprising electrically conducting material on the surface facing the side of the carrier carrying the specimen, and generating a magnetic field with said electromagnetic inductor in the presence of the biological specimen as recited in claims 75-77; a solid member in combination with a carrier and an electromagnetic inductor for controlling the temperature of a specimen, said support member being a cartridge for the carrier support member for testing or treating a specimen of biological material, and said support member comprising electrically conducting material on the surface facing the side of the carrier carrying the specimen

and said electromagnetic inductor capable of generating an oscillating magnetic field to cause induction heating in the electrically conducting material of the support member as recited in claims 78-81; a solid member in combination with a carrier and an electromagnetic inductor for controlling the temperature of a specimen, said support member being a cover plate for a microscope slide support member for testing or treating a specimen of biological material, and said support member comprising electrically conducting material on the surface facing the side of the carrier carrying the specimen and said electromagnetic inductor capable of generating an oscillating magnetic field to cause induction heating in the electrically conducting material of the support member as recited in claim 82.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
